COMPLIANCE

We strive to bring you software solutions to everyday business problems – problems that eat away at the efficiency of your organisation and sap the energy and resources of your people. Our aim is to have you heading in the right direction, towards improved business efficiency and ever higher levels of quality and performance.

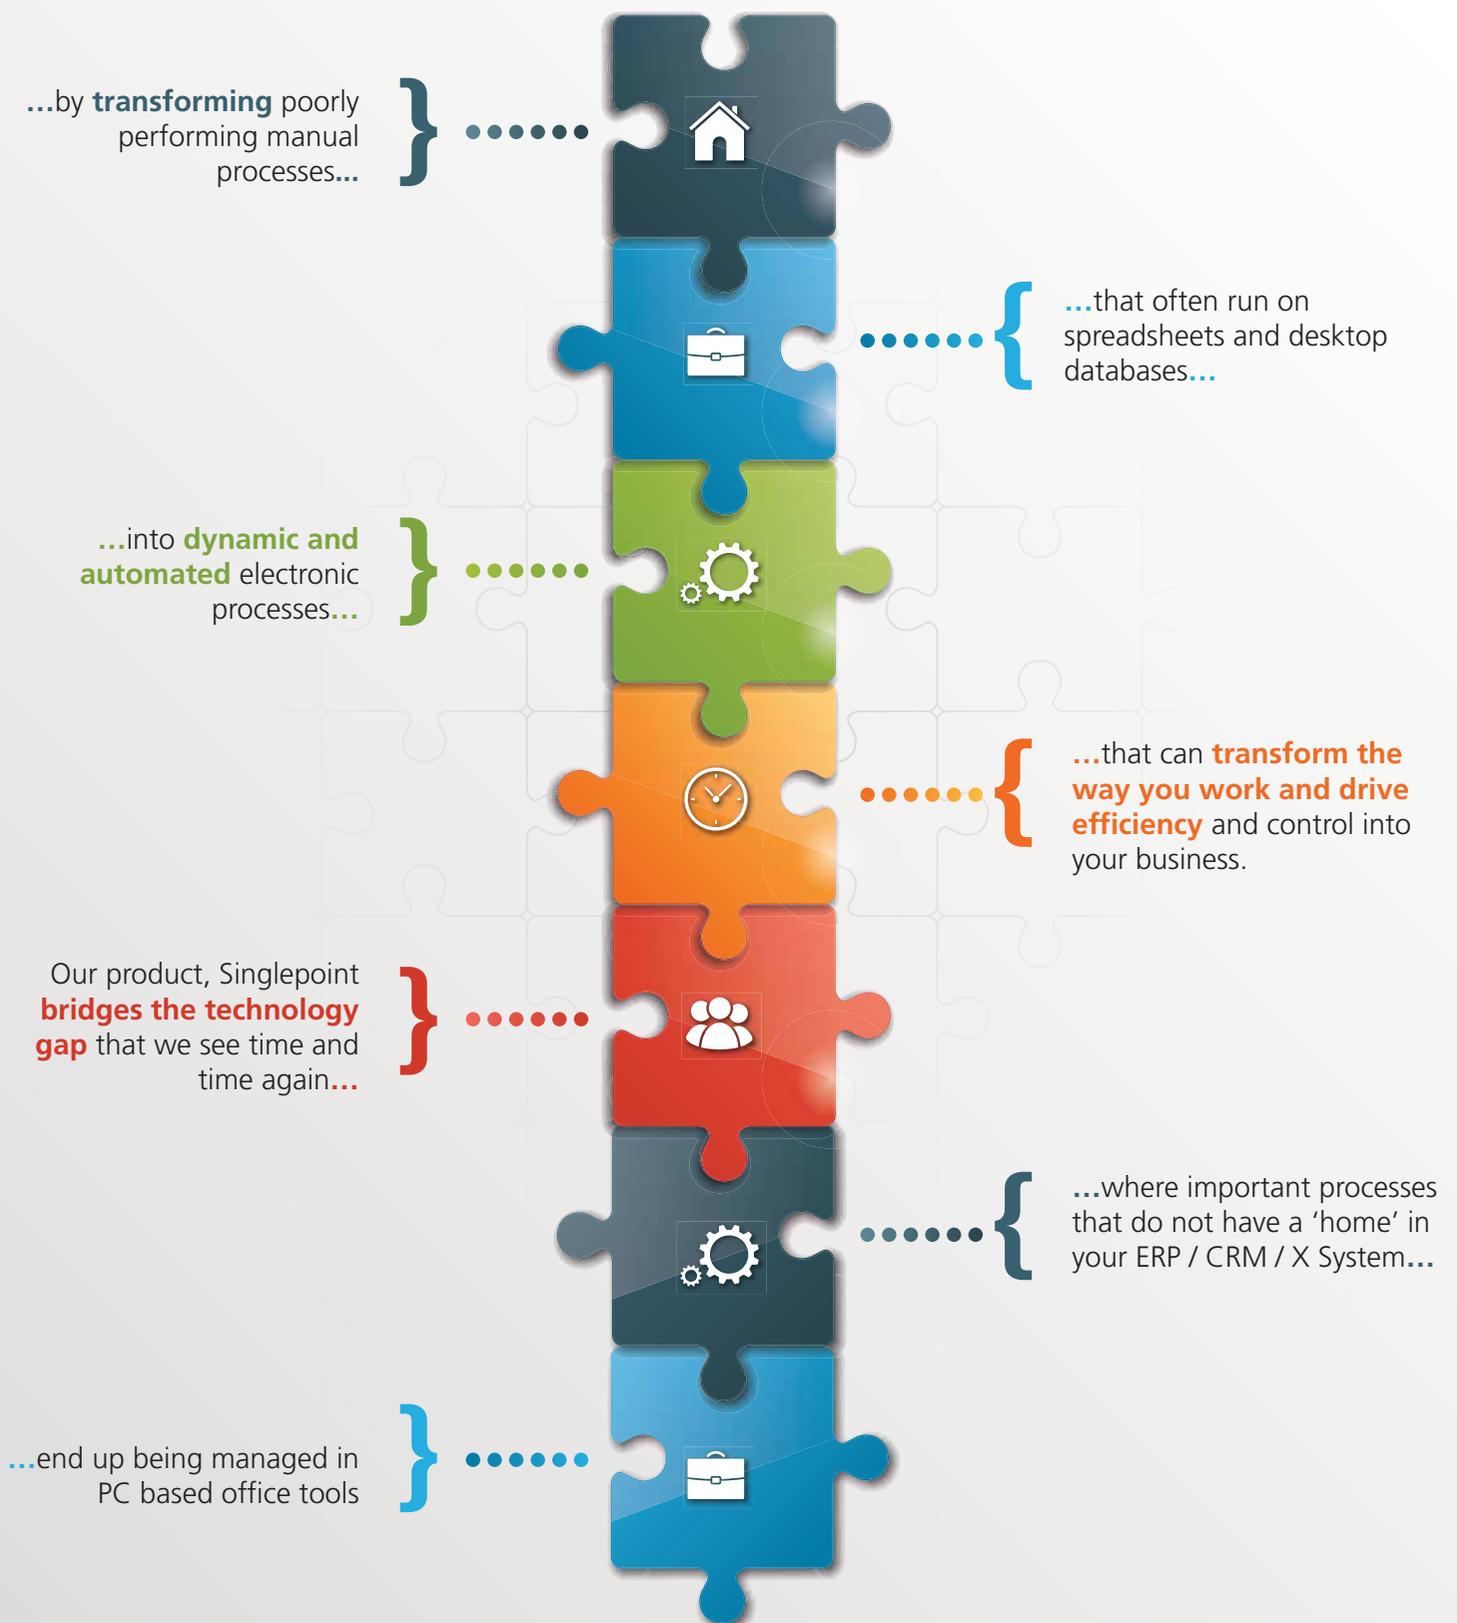

We synchronise people to the process - throughout the organisation. Unlike other systems that often fail to capture the unique way your business works, our solutions bring people (staff, customers and suppliers), data and processes closer together.

- **Make best practice an intrinsic part of what your people do - day in, day out**
- **Formalise, streamline and control your key business processes**
- **Deliver the right information to the right person at the right time**
- **Reap the benefits of real-time data reporting**
- **The result is increased efficiency and higher quality products and services**

With twenty years' experience and a string of high profile customers to our name, we have the knowledge and the know-how to make a real difference to the way you run your business.

To learn more about how we can help your business through process automation, call +44 (0)1628 421829 or email enquiries@synchronology.co.uk for an initial discussion or to arrange an on-site meeting and product demonstration.

Here at Synchronology, we work with our customers to help them improve their business processes

Our family of integrated software modules

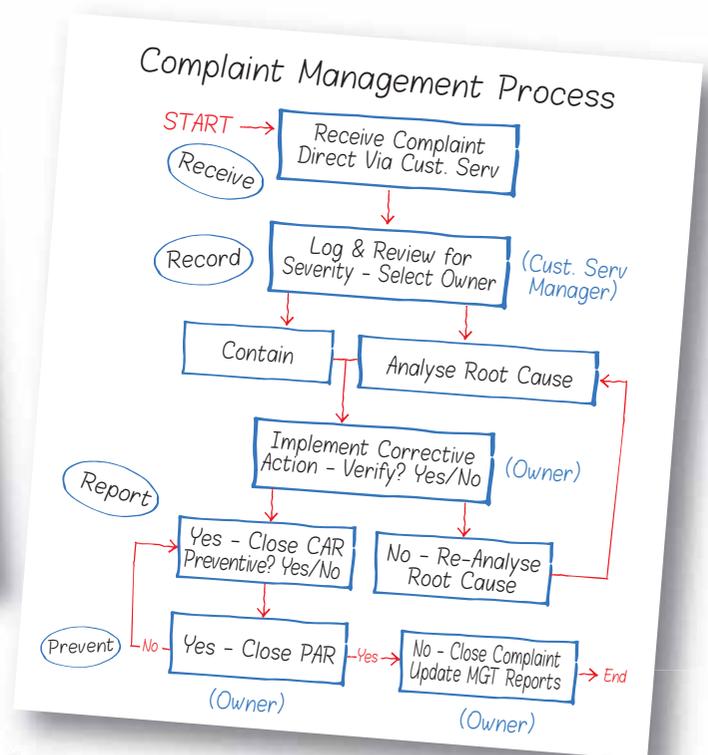

Out of the box solutions

If you can draw it, Singlepoint can build it

All of the Singlepoint modules are built on a powerful Business Process Management platform, however we can also use the same platform to design custom modules in a fraction of the time it would normally take to develop software modules in code.

The Singlepoint Business Process Management (BPM) Platform is a hugely powerful, class-leading application design environment. Drag and drop operation combined with a host of pre-configured workflow controls allows for the creation of simple or complex process-based applications.

How Synchronology has improved our customers' businesses

// We had varying degrees of competence on the shop floor, within 2-3 weeks of the initial training every user was up to speed and they have found Singlepoint very simple to use. I can't believe how easy it runs; it's a Godsend! The engineers have been shown how to make changes and to be honest, they absolutely love it - and these were the ones who were prone to cutting corners.

**Keith Newhouse, Quality Manager,
Doncasters Trucast**

// We liked the look of Singlepoint right from the very first demonstration. It's got the flexibility and the power that we're looking for and in Synchronology we can see a team of people that will offer the highest levels of expertise and customer service that we expect.

**Colin Brown,
Director of Research and Quality Development,
The Mentholatum Company Ltd**

// We have been using Singlepoint now for the past three years and it has been an invaluable system to us in our Quality department by allowing our people to automate certain processes such as document control, auditing, issues management and reporting to the point where they are in total control and have saved hundreds and hundreds of man-hours – time that we can then re-invest back into our business. I am very happy to recommend Singlepoint and Synchronology to any prospective users of the system.

**Fons Maex, CEO,
Kim's Chocolates**

// The beauty of Singlepoint is the speed with which it can be configured to handle even the most complex processes. The on-board process and forms designer tools can quickly produce detailed input screens that guide the user carefully through the process. Vital business rules are enforced to make the process compliant and fool proof.

**Paul Tucker, Senior Quality Manager,
CooperVision**

// With the manual process, if further information was required it could be annoying having to go back to a department for this. With Singlepoint, any additional information MUST be obtained before the concession or permit can be submitted. A lot of time was wasted before wandering from office to office to get signatures. This caused a problem if, for example, the person required wasn't in his office and the permit had to be left on his desk with a note. If that then got lost, a second permit would have to be written and sent out again for approval. Although individually each document might only take 10 minutes of my time walking back and forth, over a month that is quite a saving.

**Barry Faulkner, Development Director,
Pactrol Controls Ltd**

// Taking setting sheets as an example; under the old system there was the possibility of someone using the incorrect version, thus a potential for making scrap – that cannot happen anymore. Also, machine down-time is greatly reduced because people aren't hunting around from one folder to another or trying to find a document manually in a paper system. In Singlepoint we are finding the right document in seconds. Also, and this might be difficult to believe, but we are saving a fortune on paper: things like PFMEA's are big documents and they get printed off again and again and the cost in paper is substantial.

**Stella Wilkes, Quality Engineer
ZF TRW**

// We have been using Singlepoint very successfully for running our internal audit program and are very pleased with the progress we have made in a short time. We like the simplicity and the flexibility of the tool and our users were immediately comfortable with the software. We now have a systemic method of planning and managing our audits and any associated corrective actions and we can also run reports in an instant that used to take several man-hours to collate. Also, the support we receive from Synchronology is first class.

**Steve Breckons, Quality,
Health and Safety Director, Bandvulc**
